DESCRIPTION OF AXOPAR 28 AC

The spacious and comfortable wheelhouse accommodates the entire crew and provides an unobstructed view in all directions, thanks to the large windows. The entire roof can be opened to enjoy the weather under an open sky, and there are large sliding doors on both sides.
The front seats can be rotated to form a seating area with a removable table. Under the seats, there is a fridge box and a small sink.
In the aft, there is a comfortable sleeping cabin, and in front of the wheelhouse, a separate WC in the bow.

In the forward cockpit, a table can be installed, or the entire area can be transformed into a lovely sun deck. Additionally, on the roof of the aft cabin, a mattress can be placed for sunbathing on warm days. All mattresses and other cushions have protective covers to shield them from the elements.

The deep-V hull shape, combined with "air-steps," provides outstanding performance even in challenging weather conditions and ensures surprisingly low fuel consumption.
The boat is in excellent condition and very well-equipped (see attached specification).

The Yamaha engine has 300 hp and has only been run for 308 hours.

Winter storage in a heated hall in Salo, just over an hour west of Helsinki - Helsingfors, Finland.
