DESCRIPTION OF GREENLINE 33

On offer is a stylish Greenline 33 that serves excellently as both a cruiser and a floating summer home for a couple or a small family.

The semi-displacement hull allows for very economical use; for example, at a speed of 7 knots, fuel consumption is only about 4 L/h.

The boat's single-level interior layout creates a sense of spaciousness and ensures safe movement inside the boat. The large saloon windows bring plenty of natural light throughout the vessel, and with this boat, you also won't have to struggle with canvas canopies.

The two beds in the forward cabin are adaptable and can be kept separate or joined into a double bed. If needed, two additional berths can be made up in the saloon. The enclosed bathroom features an electric toilet and a warm shower. A second shower is located on the aft deck.

Through the large glass rear doors, you can easily access the spacious aft deck to enjoy summer days. The electrically lowering swim platform expands the lounge area even further, and the walkaround deck on the starboard side allows for safe movement between the stern and the bow. As mentioned, there is no need to fight with canopies on this boat either.

This specific boat has been used in fresh water, so it has not been exposed to the wear and tear caused by saltwater.

A tractor trailer custom-designed for this boat is also included in the sale.

The boat is available for viewing in Lahti.

Please feel free to get in touch with a low threshold if you would like more information about the boat or wish to arrange a viewing on site.
