DESCRIPTION OF GREENLINE 33 HYBRID

The Greenline is designed for those who appreciate high quality, comfortable cruising, and enjoyable boating in harmony with nature – all while keeping operating costs low.

The Greenline 33 Hybrid combines modern design, generous living spaces, and excellent comfort with a unique hybrid propulsion system. It offers the possibility of silent, emission-free electric cruising over shorter distances, allowing you to glide peacefully through the archipelago, while the reliable diesel engine provides confidence and an excellent cruising range for longer passages. The electric motor also functions as an efficient generator, ensuring that access to 230 V onboard is rarely a concern, even when shore power is unavailable.

The well-equipped helm station is ergonomically designed, offering excellent visibility and all controls within easy reach.
The bright saloon and cockpit are on the same level and connected by the large aft sliding door, creating an open and sociable living area. The spacious saloon comfortably accommodates a larger group around the table, and the sofas can be converted into additional berths when required.
The galley is conveniently located adjacent to the cockpit.
Large panoramic windows provide excellent natural light and wonderful views of the surroundings, while offering protection from wind and rain.
Forward, there is a comfortable owner's cabin with a double berth that can be separated if desired.
To port, there is a space with a practical single berth suitable for one person.
The generously sized head compartment to starboard is equipped with a shower and an electric toilet.

The aft wall of the saloon can be opened completely to create one large, open living space together with the protected aft cockpit, providing an ideal area for socialising with the galley at the centre. The wide bathing platform can be folded down to create additional deck space, making swimming and boarding even more convenient.
The walk-around deck layout allows safe and comfortable movement around the boat, while the foredeck offers a pleasant area for sunbathing.

This Greenline 33 Hybrid is in excellent condition, with no history of grounding or other damage, and has logged only 181 engine hours. The boat has been meticulously maintained and continuously upgraded throughout its life. Among the most significant recent investments is a brand-new hybrid battery installed in 2026.
The boat has always been winter stored indoors in a heated hall.

This is an exceptionally well-maintained example of the highly sought-after Greenline 33 Hybrid. Its extensive upgrades, low engine hours, and outstanding overall condition make it an excellent choice for anyone looking for a modern, comfortable, and economical cruising boat without compromise.

The boat is available for viewing in Hanko, approximately 1.5 hours west of Helsinki, Finland.
