DESCRIPTION OF AXOPAR 28 AC BRABUS TRIM LINE

A stunning, highly spec'd Axopar 28 AC Brabus Trim Line powered by a high-performance Mercury 300hp engine.
Axopars are renowned for their exceptional handling and driving dynamics.
The twin-stepped V-hull combined with the 300hp Mercury engine ensures outstanding performance with an almost unnoticeable planing threshold. Running a single-engine setup also means that operational and maintenance costs are significantly lower compared to a twin-engine installation.
This particular unit is exceptionally well-equipped, featuring 2 x Simrad 12" displays, VHF, radar, AIS, bow thruster, defroster, and a searchlight.
This comprehensive gear list ensures a safe and confident boating experience even in the most challenging conditions. The walk-around side decks further enhance safety and ease of handling.
With an Axopar, you can also say goodbye to struggling with canvas covers.
The exceptionally bright and protective cabin features a highly user-friendly canvas sliding roof that can be opened or closed in an instant.
Two guests can sleep comfortably in the stylish aft cabin, and if needed, an additional berth can be converted in the main cabin.
Onboard comfort is elevated by a diesel heater, pressurized water system, transom shower, refrigerator, separate marine toilet, and a Fusion entertainment system with both indoor and outdoor speakers.
Furthermore, this vessel features the Brabus Trim Line and Premium Pack Silvertex upgrades, adding a touch of luxury to your time on the water.

The boat is located and available for viewing in Helsinki / Sipoo (Finland).
