DESCRIPTION OF LUFFE 40.04

Luffe 40.04 is a performance cruiser with a strong emphasis on performance. Once you have thrown the moorings and the sails are set, you will experience the great speed potential and you do not want to do anything else than to just sail on. And if you are into racing, then there is a good chance to win many races with a Luffe 40.04.

The boat was designed and developed in 2005 and is one of Oluf Jørgensen's most successful and popular designs. The boat handles incredibly well in all kinds of weather, and the layout and accommodation is functional both at sea and in port, and as always in a Luffe Design, everything is done in a very nice and inviting built made of the best materials based on a standard concept, but with room for customers' individual wishes regarding materials and composition.

The accommodation in this edition is made of American cherrywood, where the doors, drawers and table tops in the pantry are white. This creates a beautiful contrast and an impression of light and warmth in the best union.

Hull and decks are built in epoxy, where the underwater hull is treated with copper, and the deck and cockpit are covered with teak. She has been fitted with the new performance keel.

The list of equipment is long and can be downloaded in pdf above.

The boat is sold by the first owner.
